GitHub: github.com/Oussama-ad

HARD SKILLS

- Building **backend apps** using modern frameworks
- Building modern **website interfaces**
- Designing and implementing **data structures**
- Low-level programming** and memory management
- Exploring **AI & machine learning** architectures
- Applying **OOP principles** in real projects

SOFT SKILLS

- Problem solving**
Breaking complex issues into clear steps
- Fast learner**
Adapts quickly to new tools and concepts
- Analytical thinking**
Strong foundation in math and logic
- Communication**
Academic debate and technical writing
- Leadership**
Guiding teams toward shared goals
- Curiosity**
Self-driven exploration in ML and systems

INTERESTS

- AI Theory & Model Architecture
- Machine Learning
- Backend Development
- Full-Stack Web

LANGUAGES

Arabic

French

English

PROFESSIONAL SUMMARY

Second-year Computer Science Engineering student at ESI Algiers, with hands-on experience in full-stack web development and a growing passion for AI and machine learning. I build real applications – from responsive frontends to backend APIs – and I actively study the theory behind modern AI models. Currently seeking an **internship** in backend, frontend, or AI/ML — where I can ship real features, work with experienced engineers, and grow fast. I move quickly, take ownership, and am eager to grow

EDUCATION

- Engineering Degree in Computer Science**2024 – Present
- Ecole Nationale Supérieure d'Informatique (ESI), Algiers*
- Coursework:** Data Structures, Algorithms, Computer Architecture
 - Academic Ranking:** Top **17** in Year 1, Top **12** this semester
 - Academic Projects:** SmartFarm (Java, OOP), Real Estate Rental Management System (C, DSA: trees, linked lists), Smart Library (Assembly - low-level memory and I/O handling).

TECHNICAL SKILLS

- Languages:** Java, C, JavaScript, Assembly, Python, Dart, PHP, SQL
- Web Development Frameworks:** Next.js, React, Express.js, FastAPI, Payload , SupaBase
- Databases:** PostgreSQL, MySQL, SQLite, MongoDB
- AI/ML:** PyTorch
- Tools:** Git & GitHub, Docker, Cloud Services, FTP tools
- Project Management:** Agile methodologies (Scrum, Kanban)

PROJECTS

- Smart School Management System**2026
- Technologies: React, PHP, MySQL, Octinium (FTP)*
- Led a team of **6**, delivered in **3 months on schedule** and managed project planning, task distribution, and execution using **Agile methodology**
 - Designed **MVC backend in PHP**, reducing code duplication by **40%** and ensuring separation of concerns and maintainable code structure
 - Developed core modules including **user management**, **Academic operations management**, and **authentication system** supporting **6 user roles** (admin, teacher, student, director, parent) with role-based access control
 - Ensured smooth **frontend-backend integration** between React interface and PHP RESTful endpoints

- E-commerce Website for Spice Products**2025
- Technologies: Next.js, Supabase*
- Led a team of **3** to build a **full-stack e-commerce platform** with **50+ product listings**
 - Coordinated **frontend/backend integration** and contributed mainly to **backend development**

CERTIFICATIONS

- Introduction to Machine Learning**Completed
- Duke University*
- Covered core ML concepts: supervised/unsupervised learning, model evaluation, and optimization
- Building Backend Applications with Express.js**Completed
- IBM*
- Learned to design and build RESTful APIs using Express.js and Node.js
 - Worked with routing, middleware, and server-side architecture
